

Australia's latest CIS Tender 4 has delivered a landmark set of 20 clean energy projects, totaling to a massive 6.6 GW of renewable capacity and 11.4 GWh of battery storage. These are ...

As the world races toward net-zero emissions, Australia has unveiled its first integrated wind-solar-storage hybrid power station - a landmark project redefining renewable energy reliability.

"RES is committed to Australia's energy transition, with projects in solar, wind, and storage well underway. The skills, the supply chains, and the will are all there to make clean energy ...

Australia's solar and energy storage sectors delivered strong performance during the third quarter of 2025, with grid-scale solar generation reaching 1,699MW average output while...

Australia is already transforming its energy systems to achieve the Australian Government's target of 82% renewable energy in the Australian grid by 2030. Australia is home to: some of the world's ...

Mountains of clean power are regularly "wasted" as Australia's energy system evolves. But a large amount of battery storage is waiting in the wings, ready to soak it up.

The development marks a decisive shift away from fossil fuels and highlights the growing maturity of Australia's solar, wind, and energy storage sectors. According to data from the National ...

As reported by PV Tech in 2022, the state government received bids for over 5.5GW worth of wind and solar generation projects and over 2.5GW of storage systems, something that was ...

However, this report has gone further by modelling the cheapest cost across the grid, including different power generation options, energy storage, transmission lines and gas backup.

Australia generates substantially more solar electricity per capita than any other country, and is also a large producer of wind energy. It is tracking towards 82% renewable electricity in...
