

This guidance report has been commissioned by the Australian Energy Council to initiate and facilitate collaboration amongst its member organisations towards a harmonised leading practice approach for grid ...

We take measurements in 3 separate categories to assess carriers" compliance with EME standards. This category seeks to establish whether the measured EME power density at a base station is ...

Figure 4 - Revising thermal management system into a high-capacity but acoustically well attenuated central cooling unit - An example of a typical BESS station layout for decentralised large-scale BESS projects

Below are guidelines, standards and schedules made by the AEMC and the Reliability Panel under the National Electricity Law. Documents under review can be found on the related project page. View historical guidelines ...

By focusing on energy efficiency and demand management across its sectors, Australia could reduce its electricity use. Every megawatt of electricity saved equals less infrastructure needed ...

The first report, Lessons Learnt and Future Directions from ARENA's Grid-Forming Battery Portfolio (June 2025), examined four pioneering projects: Hornsdale Power Reserve Expansion, Wallgrove ...

The research presented in this report is funded by CSIRO as a part of CSIRO's contribution to the initiatives of the Australian Research in Power Systems Transition (AR-PST) and is carried out with the support of ...

Provide an accurate response of the plant to changes in network frequency, and active power supplied to or consumed from the network, as determined by the available power, regardless of whether it is ...

The population profile for power transformers is crucial for effective lifecycle management. This profile includes detailed data on the quantity, types, locations, and specifications of these assets within the electrical ...

The AER has developed guidance intended to help System Strength Service Providers navigate the Efficient management of system strength on the power system rule.
