

Base station communication equipment security issues

Base stations face multiple risks, including physical, electrical, and environmental safety. A safety incident can not only cause site outages but also potentially damage equipment and cause casualties.

Mostly, the problems occur at tower base station (TBS) are temperature fluctuation, burglary, high energy consumption, unauthenticated entry and high maintenance cost.

COMSEC failures are almost always due to human factors. It's not that the technology doesn't work; it's that people get complacent, tired, or distracted. They skip a step, leave a radio ...

We varied the base station implementation to simulate legitimate vs. faulty but legitimate vs. fake and malicious base stations, where a faulty base station notifies the user of the connectivity disruption ...

Fake base stations comprise a critical security issue in mobile networking. A fake base station exploits vulnerabilities in the broadcast message announcing a base station's presence, ...

Regular system updates, penetration testing, and strict access controls maintain a resilient security posture for military base communications systems, safeguarding vital operational data and national ...

Military installations face increasingly complex security threats, ranging from unauthorized access and insider risks to drone incursions and evolving cyber vulnerabilities.

We analyze our scheme's security, performance, and the fit to the existing standardized networking protocols. Our work involves the implementation building on X.509 certificate (adapted), smart ...

With over 7 million communication base stations globally powering our connected world, a critical question emerges: How secure are these critical nodes in our digital infrastructure?

In this article, we'd like to share some ideas and thoughts on how the equipment of the base station subsystem, in particular the second generation (2G) basic communication networks, can...
