

Over the next year, three new community-scale battery energy storage systems (BESS) will be deployed across Canberra to optimize solar energy usage, stabilize grid demand, and ...

With ambitious climate targets - including 100% renewable electricity by 2025 - the Australian Capital Territory (ACT) relies on cutting-edge storage systems to stabilize its grid. Let's explore how these ...

The Australian Capital Territory (ACT) government has announced the development application has been approved to deliver the first stream of the Big Canberra Battery project that is to ...

The \$300-400 million Williamsdale Battery Energy Storage System will plug into the ACT electricity grid from early 2026, with construction now underway on the site adjacent to the solar farm.

Designed to tackle the intermittency of wind and solar power, this pumped hydro initiative could store enough electricity to power 200,000 homes for 8 hours--equivalent to keeping Sydney Opera House ...

Explore Canberra's bold microgrid and solar battery push -- community and grid-scale storage, peak demand reduction and renewable energy solutions with expert solar support.

Canberra is taking bold steps towards a sustainable future, with recent initiatives set to transform how we generate, store, and use energy. Here's what you, as a Canberra resident, need to ...

The Big Canberra Battery will give the community energy security by keeping their power running, while helping reduce emissions. The large-scale battery will deliver at least 250 megawatts ...

ITP Renewables was engaged by ECU Energy to provide expert planning support throughout the development and delivery phases of the 250 MW Big Canberra Battery system, which will begin ...

This allows renewable energy to flow to homes and business across Canberra when demand is high and solar generation drops. Construction is now underway on concrete bases for the ...
