

China's achievements in solar power generation

How much solar power has China added in 2025?

The total solar capacity added from January to May 2025 reached nearly 198 gigawatts, marking a remarkable 388% increase from the same period in 2024, a year when China had already set a record for renewable power installations for the second consecutive year. Additionally, during this timeframe, wind energy capacity increased by 46 gigawatts.

Can China make more solar power?

China can now make more solar power than the rest of the world. Data released by China's National Agency last week revealed that the country's solar electric power generation capacity grew by a staggering 55.2 percent in 2023. The numbers highlight over 216 gigawatts (GW) of solar power China built during the year.

How much energy does China generate a month in 2025?

China achieved a new milestone in its energy transition, with wind and solar power together generating a quarter (26%) of the country's electricity in April 2025, the highest monthly share on record, according to the latest data from global energy think tank Ember. This surpasses the previous record of 23.7% set a month earlier in March 2025.

How much solar power does China have?

China was responsible for installing a massive 256 GW of that solar capacity. For context, it took until September last year to pass the 350 GW mark. This year, the milestone was achieved in June. That pace cements solar as the fastest-growing source of new electricity generation worldwide.

China broke its own renewable energy record once again in 2024, installing 80 gigawatts (GW) of wind capacity and 277 GW of solar capacity, according to the National Energy ...

China is setting unprecedented records in solar and wind energy installations, achieving monumental growth in May 2025. During this month, the country added 93 gigawatts of solar ...

Key Takeaways China surpassed 1,000 GW of solar capacity in 2025, nearly half of the global total. Industrial policy, state-owned firms, and private innovators together fuel its leadership. ...

China installed more solar panels in 2023 than any other nation has ever built in total. The 216.9 gigawatts of solar power the country added shattered its previous record of 87.4 gigawatts ...

China has set a new benchmark in its transition to renewable energy, with wind and solar power sources generating 26% of the nation's electricity in April 2025. The achievement marks ...

massively expanding solar power capacity, China's solar power generation is showing significant growth this year. In 2024, total solar power generation increased 46.1% y-o-y, reaching ...

China's achievements in solar power generation

China's installed solar photovoltaic capacity now surpasses 1,000 GW, making it a global leader in clean energy technology and climate change discussions. Despite these achievements, the ...

Solar surged 64% in H1 2025 with 380 GW added worldwide, led by China's record pace, keeping 2025 on track for new highs.

China achieved a new milestone in its energy transition, with wind and solar power together generating a quarter (26%) of the country's electricity in April 2025, the highest monthly ...

Last year, China marked a significant achievement in renewable energy, reaching its 2030 target for solar and wind power capacity six years early. This success is the result of a rapid ...
