The current (in amperes, A) produced by the solar panel can be determined using Ohm's law, where the current is the power divided by the voltage: $\text{Current (A)} = \text{Power (W)} / \text{Voltage (V)}$

Solar panels differ in voltage: Current: This is like the amount of water flowing through the hose. It's measured in amps (A). More amps mean more electricity flowing. Power: This is how much ...

This solar panel amps calculator helps you find the current of your solar panels. We also give you insight into Ohm's Law and how to read your panel's specs.
