

What is kilowatt per rack?

Kilowatt per rack (kW/rack) is the power assigned to a server rack in a data center. It is measured in kilowatts (kW) and represents the total power needed for all IT equipment in that rack. Colocation providers offer different power levels: Power density depends on server type, workload, and cooling efficiency.

What's new in power rack design?

Newer designs will opt for a closed-loop, zero-water evaporation design. Microsoft, Meta, and Google are working with OCP partners to design a new power rack side pod that the companies say will enable IT racks to reach densities of up to 1MW per rack. Announced last year, the design is known as Project Diablo.
