

Discover if your home is perfect for solar panels with our comprehensive assessment guide. Free tools, expert tips, and step-by-step evaluation process included.

To see if your house is a good candidate for solar, try out a solar panel suitability checker such as Google's Project Sunroof.

Installing solar panels can lower your electricity costs, reduce your tax bill, and offer healthy future returns. But there's a lot to consider before you plug into the sun.

Starting your clean energy journey begins at home -- first, find out if your house qualifies for solar panels. Moving to solar power is more than a preference: it hinges on tax incentives, local rules, your ...

Yes, solar panels are still worth it for the vast majority of U.S. homeowners in 2026 and beyond, despite the end of the 30% federal solar tax credit for some systems. The primary financial driver is the cost of grid ...

In most cases, yes, you can install solar panels on your home if it is governed by an HOA, though you will likely have to submit a request. Many states and territories have enacted solar access laws, which prevent HOAs ...

It's important to work with a trusted solar expert who can evaluate your home, roof, and energy needs to determine if solar is the right fit before making the switch to cleaner energy. We've broken down the ...

There are four main types of solar-powered homes: passive, solar-plus-storage, fully powered and partially powered. Even a partially solar home can still offer up to 40% in energy cost...

Electricity production from solar grew by nearly 14 percent to 19,688 megawatt-hours (MWh) in the first quarter of 2024, up from 17,328 MWh during the same period last year.

When you use a solar panel system -- also called a photovoltaic or PV system -- to produce power for your home, you won't have to buy as much electricity from the utility company, and you get the benefits of ...
