

Flutter analysis is performed on a three-cable-supported flexible PV support structure using the full-order method. The dominant flutter modes and their energy participation factors are ...

Fixed supports (rigid structures) and flexible supports (tensioned cable systems) are two main methods used in constructing photovoltaic power plants, and their construction technology has ...

Through the four installation methods of hanging, pulling, hanging and bracing, the Flexible mounting solution can be installed freely in many directions, which can better improve the support method of ...

Based on the proposed field modal testing and modal parameter identification method, the high-order modal parameters of flexible PV support structure are identified in the first time.

To improve the span and stiffness and widen the application scene of the flexible photovoltaic support system, a new type of three-dimensional cable-truss flexible photovoltaic support system is proposed ...

In this paper, the new flexible photovoltaic support structure is summarized, and the related research articles on the structural design model and wind-induced effect of the flexible ...

This study involves the development of a MATLAB code to simulate the fluctuating wind load time series and the subsequent structural modeling in SAP2000 to evaluate the safety ...

In the photovoltaic (PV) solar power plant projects, PV solar panel (SP) support structure is one of the main elements and limited numerical studies exist on PVSP ground mounting steel frames to be a ...

Since 2000, flexible support photovoltaic module structure systems have been widely used because of their advantages such as short construction period, large span, good economic ...
