

This pilot project is expected to be the largest flow battery energy storage facility in Alberta and will aid the region's sustainability and decarbonization efforts.

This project will help build out Aqua-Cell's battery management system and demonstrate the scalability of its flow battery technology for energy storage.

Rather than storing electricity in solid electrodes (ie. lithium-ion), flow batteries use positively and negatively charged liquid electrolytes, pumped from their separate tanks through "cell ...

This company overview profiles the startups and innovators in flow battery and covers the features and highlights of their technology.

An Edmonton-based company innovating flow battery technology for energy storage this month announced the launch of multiple "key pilot projects." Alberta's Aqua-Cell Energy says the ...

Maleki suggests that aqueous redox flow battery technology, such as we show in our images, may meet Canada's energy storage need in future. And perhaps the rest of the world's ...

Aqua-Cell's flow battery technology is designed for long-duration storage to store and enable renewable energy. It offers a cost-effective, sustainable alternative to traditional energy ...

Elemental Energy and Invinity Energy Systems have announced one of Canada's most innovative and ambitious renewable energy projects, in which approximately 40,000 solar panels are ...

While lithium-ion dominates the battery market today, the rows of redox flow batteries inside the shed could be part of a storage solution as Canada adds more solar, wind and other ...

Aqua-Cell Energy, based in Edmonton, says the freshly announced pilots are designed to demonstrate the reliability and scalability of its flow battery systems, which the cleantech upstart ...
