

This dashboard ranks countries/areas to their renewable energy power capacity or electricity generation. The data can be further refined based on region, technology or year of interest.

The surge in solar power production is largely attributed to falling costs and increased investment in the sector. In 2023, the cost of utility-scale solar photovoltaics decreased globally,...

Discover the top 5 solar-powered countries in 2025. From China to India, explore global solar capacity, growth trends, and future projections in renewable energy.

This report summarizes the latest statistics on solar power capacity by state and highlights the top U.S. states in solar power generation.

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest percentage of their electricity from solar power.

Solar Power Generator: Solar maintained its status as the world's fastest-growing electricity source for the nineteenth consecutive year, adding more than twice as much new electricity worldwide as coal in ...

Global data representing the solar resource and PV power potential has been calculated by Solargis, and released in the form of consistent high-resolution data layers.

This website, gorge.solar, will provide verifiable information from credible sources about solar energy generation. It will provide information about the technology, manufacturing, and use of solar panels, ...

France opened a flurry of nuclear power plants in the 1980s and 1990s, giving it low-carbon electricity ever since France's nuclear fleet gives it one of the world's lowest-carbon electricity grids

Our rundown of the countries around the world using the most solar energy, from Mexico to China
