

Everything you need to know about fully solar powered houses in 2025. Complete cost analysis, installation guide, real examples, and expert insights. Start your solar journey today.

Solar accounted for 66% of all new electricity-generating capacity added to the US grid in 2024, as the industry continued experiencing record growth. Domestic module manufacturing ...

Learn how residential solar power works, why costs are falling worldwide, and how to calculate your payback period with clear examples and real data.

Solar photovoltaic electricity generation increased substantially between 2019 and 2020, rising over 23% in just a single year. It now stands as the world's third-largest renewable energy ...

During the first nine months of 2024, utility-scale solar power generation (thermal and PV) output increased a whopping 30.1% from the same period in 2023. Estimated total solar from all...

Solar projects are making it easier for Americans to choose solar energy to power their homes. Since 2008, hundreds of thousands of solar panels have been installed across the country as more and ...

Yes, solar panels are still worth it for the vast majority of U.S. homeowners in 2026 and beyond, despite the end of the 30% federal solar tax credit for some systems. The primary financial driver is the cost ...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, ...

Solar capacity continues to surge from sprawling utility-scale solar farms to rooftop panels powering residential homes. Backed by falling costs, federal incentives, and public demand ...

In our STEO forecast, utility-scale solar is the fastest-growing source of electricity generation in the United States, increasing from 290 BkWh in 2025 to 424 BkWh by 2027. Almost 70 ...
