

How to store lithium ion batteries?

Lithium battery storage buildings with climate control are ideal for storing bulk quantities of Li-ion batteries at specific temperatures to ensure a safe storage environment. Also, be aware of the state of charge while storing. Nickel and lithium-ion batteries should be stored at around 40% state of charge.

Is it safe to store lithium batteries at home?

Storing lithium batteries at home can be safe if you follow key precautions. Firstly, avoid extreme temperatures. Keep the batteries in a cool, dry place away from heat sources and direct sunlight. This helps prevent overheating and potential fire hazards.

Why do lithium batteries need to be stored properly?

Because of a propensity to self-heat, properly storing lithium batteries is necessary to avoid fires that can harm you and your property. When the lithium battery temperature is -20 to 5°C and there is an incoming charge current over 10 amps, self-heating can occur. The result can be the release of gas, which can cause fires, and even explosions.

What are the storage requirements for lithium-ion batteries?

The storage requirements for lithium-ion batteries are a mix of the right ventilation, managed humidity level, and location regulation. Lithium-ion batteries should be stored in cool, moderately dry conditions away from direct sunlight, heat/flame-encouraging materials, and humid elements.
