

This paper aims to explore the feasibility of hybrid mini-grid power systems for electrifying rural areas in Iraq. The focus is on identifying the most cost-effective and reliable system through size optimization ...

Through MATLAB simulations with the MOISSA algorithm, and comparative analysis to other algorithms, the study shows a significant reduction in energy costs and a decrease in power supply probability, ...

mains power supply. 1 TRODUCTION: Different types of renewable energy sources are nowadays used to supply different applications i. rural and urban areas [1]. Increased reliability and energy ...

With the aim of providing a reliable energy supply, the research then focused on the innovative application of the Rosetta model, crucially adapting Spain's load profiles to Iraq's unique ...

This article aims to provide a comprehensive review of control strategies for AC microgrids (MG) and presents a confidently designed hierarchical control approach divided into different levels.

This research, presented a successful alternative, which applied all over the world, which is the local microgrid. Also, it's developed a design for this microgrid that suits the conditions of Iraq ...

The microgrid market is supported by its growing applications in the utility/community segment as microgrids can integrate renewable energy sources, provide grid services, and enhance resilience ...

Abstract Iraq faces a deepening electricity crisis, marked by chronic power shortages, reliance on diesel generators, aging grid infrastructure, and minimal integration of renewable energy. This research ...

Let's be real: when you think of Iraq, solar panels and microgrids might not be the first things that come to mind. But guess what? The country is quietly becoming a hotspot for energy ...
