

Is a solar generator safe for indoor use?

Fact: FEMA and NEC Article 702 require a listed transfer switch; wall-outlet/dryer-plug backfeeds are dangerous and illegal. A high-capacity solar generator--no combustion, no carbon monoxide--meets the "generator safe for indoor use" test.

Can a generator be used indoors?

Learn exactly which generators can be used indoors (battery/solar units), how to size them, and the safety practices that prevent carbon monoxide and electrical hazards. Power failures prompt an important question: can generators be used indoors? If the unit burns fuel, no--carbon monoxide makes it unsafe.

Should you run a generator outside?

Generators simply compress that national statistic into a single dark night. The practical rule is brutally simple: run combustion generators outside, at least 20 feet from any door, window, or vent, and point the exhaust away from the house; that's CDC language, not folklore.

Should a garage door be open after a storm?

After major storms, investigators still hear the same refrain: "It's fine if the garage door is open." A post-hurricane study documented residents who believed ventilation or a cracked door made generator use indoors acceptable--beliefs that correlated with clusters of poisonings.
