

Japan Home solar Power Generation System Project

Pacifico Energy has been developing solar power generation projects in Japan since 2012, the first year of the introduction of the government's fixed price purchase system for renewable energy.

If you're planning to get a new house or are considering getting solar panels, this guide will provide you with the essential information to help you understand solar installations and how to ...

This goal reflects Japan's acknowledgement of its significant solar energy potential, which is enough to produce four times the country's current energy needs through PV system projects, ...

Artist's image: The newest HEMS housing system combining a fuel cell and a solar cell, to generate more power than the household consumes. Surplus electricity will be sold to power companies.

In Japan, we are steadily approaching the establishment of a society where photovoltaic power generation is introduced on a mass scale, but various issues have emerged in order to realize ...

Japan is making steady progress toward the practical implementation of both. The SBSP project involves the space launch of satellites equipped with giant solar panels measuring 2 km², ...

To encourage the generation of renewable energy, the Tokyo Metropolitan Government introduced a regulation mandating the installation of solar panels on the roofs of new detached ...

The Japanese government is seeking to expand solar power by enacting subsidies and a feed-in tariff (FIT). In December 2008, the Ministry of Economy, Trade and Industry announced a goal of 70% of ...

The system is intended to ensure the utility companies purchase electricity at a set price for 20 years in principle and make it easier for solar power generators to project when they...

Factors such as solar PV projects under construction in the pipeline and planning stages are expected to boost the cumulative installed solar energy capacity during the forecast period. Let's ...
