

Mining mobile substations are divided into two types: vehicle-mounted and sled-mounted. Adopting a modular design, they integrate a high-voltage switchgear room, a transformer room, and a medium ...

This integrated substation combines 35kV high-voltage switchgear, a 10,000 kVA S20-M series oil-immersed transformer, and a 6kV low-voltage distribution system into a single skid-mounted unit that ...

We have worked with our customers worldwide from the high altitudes of Bolivia to the deserts of the Sahara and jungles of Ecuador to provide substations custom designed for dependable operation in ...

They adopt a modular design and integrate a high-voltage switch room, a transformer room, and a medium-low voltage switch room. The vehicle-mounted type realizes efficient movement through ...

Integrated with a high-performance oil-immersed transformer, high-voltage incoming cabinet, low-voltage outgoing cabinet, and protective relay systems, the substation ensures safe and efficient power ...

Designed with precision by our experienced engineering teams, mobile substations integrate all electrical and automation components required to ensure a reliable and uninterrupted power supply.

Engineered with exceptional craftsmanship, this powerhouse efficiently handles high-voltage intake, transformation, and smooth low-voltage distribution, offering unmatched control of electrical energy.

Its widely used in urban republic power distribution, high rise building, residential areas, parks, and high-speed roads, as well as oil fields, industrial and mining enterprises, temporary construction areas.
