

The Republic of Cyprus's electricity supply faces severe strain during evening hours as power plant failures and ongoing maintenance work continue to plague the national grid, forcing ...

The story of renewable energy in Cyprus is both a story of progress and missed opportunities. Within six years, the island tripled its RES installed capacity and increased their share ...

This study aimed to examine the current energy sector in NC and identify strategic energy alternatives based on sustainable energy planning in the transition from fossil energy to renewable energy.

The Minister described the integration of renewable energy sources (RES) into electricity as particularly challenging for Cyprus. The share of RES in electricity stood at just 17%, and Cyprus ...

Frequent power cuts in Northern Cyprus have reignited debate around energy security. The way forward lies in renewables and cooperative planning.

Other countries, like Greece, also must curtail renewable electricity units, but maintaining system stability requires more drastic cuts in the isolated island nation. Notably, it still lacks energy ...

With the European Union under pressure to cut emissions, reduce Russian gas dependence, and diversify its energy partnerships, Cyprus is in a unique position. The island - ...

Cyprus' green energy transition, once a major draw for investors, is now facing serious roadblocks as the national electricity grid struggles to handle more renewable energy projects.

This study examines the reduction of economic costs and environmental impacts through the optimal management of power generation units and the utilization of natural gas (NG) and ...

It presents the policies and measures planned and implemented by the Republic of Cyprus to meet the national targets for greenhouse gas emission reduction and energy. It was prepared through the ...
