

LEAD provides laser machines for smart and automated photovoltaic manufacturing, enhancing precision and productivity.

Our automated Solar/PV modules production line includes a complete set of equipment, such as solar cells laser cutting, string soldering, welding, glass loading, layup, laminating, framing, J-Box ...

LIKE LASER's picosecond laser glass cutting machines deliver non-contact, low-stress processing for photovoltaic glass, reducing microcracks and breakage while boosting throughput and ...

The Solar PV-Screen Printing Grid Version Film Cutting Equipment is used for laser patterning of thin films for the upstream photovoltaic grid manufacturers. It consists of a quartz frame, XY linear motor ...

Whether it's enhancing solar cell efficiency through advanced laser scribing techniques, improving panel durability with precise laser welding, or ensuring component traceability with durable laser marking, ...

High automation level: Solar cell automatic loading and unloading, automatic positioning, automatic scribing, automatic boxing.

With over 30 years of experience, we deliver precision laser cutting, welding, scribing, and more to support solar panel manufacturers and other renewable energy applications. We are your trusted ...

Our innovative laser solutions enable manufacturers and recyclers in the industry to achieve their full potential by meeting the highest production standards and driving sustainability.

Built for Mono PERC, TOPCon, HJT, and IBC solar cells, our laser systems deliver precise control, high throughput, and excellent repeatability, ensuring consistent quality and maximum yield for every ...

Our broad portfolio of lasers for PV is used in a variety of processes for crystalline, multi-crystalline and thin-film a-Si, CdTe and CIGS PV. Our lasers are backed by our team of applications engineers and ...
