

To address the pressure on peak shaving of the power system resulting from the widespread integration of renewable energy to generate electricity with the "dual-carbon" objectives, an optimized ...

With the continuous growth of photovoltaic (PV) installed capacity, the issue of photovoltaic curtailment has become increasingly prominent. Energy storage systems (ESS), through flexible charging and ...

To address this issue, this paper proposes a capacity optimization configuration strategy for hybrid energy storage systems (HESSs) that accounts for energy storage response characteristics and ...

Therefore, we propose a multi type energy storage optimization configuration strategy that comprehensively considers economic and technological factors, aiming to balance the consumption ...

In this paper, an optimization method for energy storage is proposed to solve the energy storage configuration problem in new energy stations throughout battery entire life cycle.

Summary This article proposes a payload fluctuation guided multi-objective particle swarm optimization algorithm (PFG-MOPSO) based optimal configuration strategy for power grid battery energy storage ...

Finally, based on the characteristics of new power systems, the paper discusses specific energy storage optimal allocation strategies from the perspectives of changes in energy structure...

In recent studies, a market-based framework has been proposed to optimize the flexibility of renewable energy in distribution and transmission systems (Pourghaderi et al., 2023).

To improve the accuracy of capacity configuration of ES and the stability of microgrids, this study proposes a capacity configuration optimization model of ES for the microgrid, considering ...

To address the complexities arising from the coupling of different time scales in optimizing energy storage capacity, this paper proposes a method for energy storage planning that accounts for ...
