

Backed by development partners Mercedes-Benz, Stellantis and Hyundai-Kia, Factorial's quasi solid-state battery technology is helping set a new course in the automotive industry, evolving ...

Here, we demonstrate a facile inkjet printing and electrodeposition approach for fabricating a highly integrated flexible photo-rechargeable system by combining stable and ultra-high-rate quasi ...

A study from Doshisha University aimed to develop a novel flame-retardant quasi-solid-state battery by combining solid and liquid electrolytes. With higher safety and durability and ...

To overcome these challenges, a team of researchers from Japan has developed a non-flammable quasi-solid-state LIB that can overcome the limitations of conventional batteries.

Our solar battery cabinet systems are storing Pylontech lithium-iron phosphate (LiFePO) batteries, in particular the US3000C rack mounted battery modules. We install these in a purpose built cabinet ...

This white paper cuts through the noise by presenting real data on the current state of quasi-solid-state batteries (QSSBs) developed by Factorial.

A structural battery prototype in full cell configuration was constructed using NMC622-CFC || GPE || CF, with an outstanding capacity retention of 95.2% at ambient conditions at a 1C rate ...

While semi-solid-state batteries are significantly safer than conventional liquid-electrolyte batteries, they are not inherently immune to failure. The presence of even a small amount of liquid or gel plasticizer ...

Researchers from Doshisha University, Japan, have developed a novel quasi-solid-state lithium-ion battery (LIB) that combines non-flammable solid and liquid electrolytes.

The LZY solar battery storage cabinet is a tailor-made energy storage device for storing electricity generated through solar systems. They assure perfect energy management to continue power ...
