

Smaller distribution substations are subdivided into container-sized modules, which can be manufactured, assembled and tested at the factory, allowing easy transport and fast installation and commissioning at site.

Containerized mobile substations are sheltered and address applications in challenging environmental conditions including areas with high pollution, high humidity, extreme temperatures or sand storms.

Other energy infrastructure projects include expanding and modernizing our electric substations to help increase system capacity and reduce congestion on the power grid. As our region expands, our demand for energy ...

These systems combine portability, scalability, and high-efficiency power management - perfect for industries ranging from manufacturing to commercial complexes. Let's break down why this technology matters and ...

Traditional substation infrastructure requires lengthy construction periods and high costs, whereas containerized substations bring the speed and flexibility demanded by modern industry. This ...

The Containerized Packaged Substation provides a convenient, stable, safe, and fast solution for setting up a new network for the transformation and distribution of electrical power, whether on land or offshore.

The Miguel VRF Energy Storage project is a 2MW/8MWh pilot battery storage project located in East San Diego County. The structural and electrical design was provided by ECI, with construction by EPC Services ...

Develop a utility-scale battery energy storage system with a rated capacity of up to 250 megawatts (MW) and up to 1,000 megawatt hours (MWh) to reliably capture and manage electricity in an economically feasible ...

Typically, these battery systems and microgrids are installed on SDG& E-owned property; they are adjacent to our existing substation facilities or in critical locations where grid reliability and resiliency is ...

San Diego Gas & Electric (SDG& E) today announced the start of construction of the Clairemont Microgrid, one of four such projects based at its existing substations. Each microgrid is paired with energy ...
