

We analyze the effects of foldable containers using a newly developed multi-port and multi-period container planning model. The proposed model is a large-scale optimization problem, for which we ...

October 2024: CCS introduced the world's first five-in-one foldable container designed to optimize space, cut emissions, and reduce reverse logistics costs. This innovation integrates the functions of ...

This study considers the empty container repositioning problem of shipping companies that use standard and 3-in-1 foldable containers with more advanced designs. A mathematical model ...

A cost-benefit and sensitivity analysis is conducted for operating regular and foldable containers over their respective lifespans.

In this paper we analyse why previous initiatives for foldable containers failed and discuss the conditions required for successful commercial applications.

The U.S. foldable and collapsible container industry is primarily driven by the need for cost efficiency and sustainability in logistics and supply chain operations. Traditional shipping containers occupy ...

The presented foldable container passed the tests for international certifications ISO 1496-1 and CSC required for its application on site. Differently from the 4:1 folding ratio adopted by most previous ...

Using foldable containers can reduce the repositioning cost and storage space. We compare empty container repositioning costs of foldable and standard containers. Three ...

In order to examine the economic viability of the developed foldable container as compared to a standard 40-ft high-cube container, cost analysis is performed for an example route, ...

In this paper, the authors analyse the opportunities for commercial application of foldable containers. For this purpose a cost-benefit analysis is adopted in which four logistic concepts to use foldable ...
