

Sodium-ion batteries are emerging as a powerful alternative to lithium-ion, offering abundant materials, lower costs, and a smaller environmental footprint. In this deep dive, we explore ...

Sodium-ion batteries (SIBs) are being actively investigated as a potentially viable and more sustainable alternative to lithium-ion batteries (LIBs), driven by concerns over lithium resource ...

The usage of soda ash as a primary sodium source enables several advantages in sodium-ion battery applications, particularly in plug-in electric vehicles (PEV) and grid storage.

SMBs, or sodium metal batteries, have long been considered a promising candidate for grid-scale energy storage, thanks to their use of the inexpensive and widely available element - salt.

While efforts are still needed to enhance the energy and power density as well as the cycle life of Na-ion batteries to replace Li-ion batteries, these energy storage devices present significant advantages in ...

Integrating SIBs with solar energy offers a promising solution for enhancing renewable energy storage, addressing the intermittency of solar power.

This Review provides an overview of various sodium-ion chemistries with respect to key criteria, including sustainability, before discussing potential solutions, market prospects and future work.

In 2022, Bluetti announced a sodium ion solar battery for home use that is not yet available for sale, but is worth keeping an eye out for. Considering sodium ion batteries are not yet widespread, existing ...

Research suggests that sodium-ion batteries will be able to meet the growing demands for energy storage in a sustainable way.

A new, large scale iron-sodium energy storage system will be manufactured in the US, helping to support more wind and solar in the grid.
