

Solar container energy storage system industrial added value rate

How to evaluate the value-added capacity of energy storage industry?

Based on the "smiling curve" theory, we evaluate the value-added capacity of energy storage industry. Using the Principal Component Analysis method, we excavate the driving factors that affect value-added capabilities. Adopting the three-stage DEA-Malmquist index methods to analyze the efficiency differences of each link of the value chain.

How to measure value-added efficiency of energy storage industry?

Therefore, the value-added efficiency of the energy storage industry is measured according to the input indicators, output indicators and external environment indicators that affect the value-added capacity in the above.

Does value-added efficiency of energy storage enterprises improve after 2019?

The results demonstrate that the value chain presents an arc-shaped smile, and the overall value-added capacity has improved after 2019, but the midstream link is still weak. The main driving factors of value-added efficiency of energy storage enterprises in different links are quite different.

What is the value chain of China's energy storage industry?

Based on the economic characteristics of various basic activities and their value-added contributions to different degrees in the whole value chain, this paper divides the value chain of China's energy storage industry into upstream, midstream and downstream.
