

About The European Electricity Review analyses full-year electricity generation and demand data for 2024 in all EU-27 countries to understand the region's progress in transitioning from ...

The report underscores solar's increasing role in securing energy independence and meeting climate targets. Germany, Spain, and Italy continue to lead the charge, but emerging ...

Find the most up-to-date statistics about the solar photovoltaic industry in Europe

Solar broke another historical record in power generation this March for the third consecutive month, making up more than 10% of Europe's electricity mix - shows Eurelectric data.

The analysis finds that solar is making gains in every E.U. country, while coal is broadly in retreat. Last year, solar alone supplied more than 20 percent of power in Hungary, Cyprus, ...

Solar is set to become the largest green energy source globally, the question now for Europe is whether it can revamp its grid fast enough to prevent another dramatic blackout.

Ember (2026); Energy Institute - Statistical Review of World Energy (2025) - with major processing by Our World in Data. "Electricity generation from solar power" [dataset]. Ember, "Yearly ...

In our recent LinkedIn post highlighting the increase in solar output this year - a near 22% gain in Western Europe - we considered some of the drivers that contributed to that result. Now ...

As grid constraints, policy changes, and financing models evolve, Europe's solar energy growth will remain robust, positioning the EU as a global leader in renewable energy.
