

Solar power generation accounts for the national proportion

In 2022, solar power accounted for 4.75% of the energy generated in the U.S. Solar power contributed nearly 54% of all new electricity-generating capacity added to the U.S. grid in 2023.

According to the U.S. Energy Information Administration's latest forecast, in 2024, the U.S. will add 62.8 gigawatts of new utility-scale power generation. This new capacity compared to ...

Solar generation up 27%, accounting for 6.8% of all electricity The Energy Information Administration reports that utility-scale solar grew by 32%, while distributed solar increased by 15%, ...

According to our Electric Power Annual, solar power accounted for 3% of U.S. electricity generation from all sources in 2020. In our Short-Term Energy Outlook, we forecast that solar will ...

Solar energy accounted for 5.6% of electricity generation in the United States in 2023, up from a 4.8% share a year earlier. California was the state with the largest renewable energy ...

1. Approximately 250 billion kilowatt-hours (kWh) of electricity were generated from solar sources in 2021, 2. This accounted for about 3% of the nation's total electricity generation, 3. The ...

Solar has added the most generating capacity to the grid for the last five years. It accounted for 53% of new generating capacity in 2023, the first time in 80 years that a renewable energy resource was a ...

How much in subsidies do fossil fuels receive? How have things changed? When will countries phase out coal power? Our World in Data is free and accessible for everyone. Help us do this work by ...

Solar energy accounted for some 6.91 percent of electricity generation in the United States in 2024, up from a 5.62 percent share a year earlier.

In 2020, renewable energy sources (including wind, hydroelectric, solar, biomass, and geothermal energy) generated a record 834 billion kilowatthours (kWh) of electricity, or about 21% of all the ...
