

Here's an ironic twist - properly permitted solar installations often deter imminent demolition. Municipal planning departments typically block photovoltaic approvals in areas slated for redevelopment.

Houston residents - and solar industry stakeholders everywhere - took notice when catastrophic hail losses in the Fighting Jays solar project made headlines.

A 2023 Gartner Emerging Tech Report revealed that 68% of demolition projects improperly handle solar components. This isn't just an environmental issue - valuable materials worth \$15 billion could be recovered ...

Nanticoke - Today, Ontario Power Generation (OPG) safely demolished the powerhouse of the former Nanticoke Generating Station (GS), which was at one time the largest coal-fired plant in the world. ...

This paper demonstrates the importance of efficient decommissioning and post-decommissioning redevelopment and examines solar power generation as one potential redevelopment pathway.

However, reputable solar panel manufacturers plan for recycling and decommissioning the panels they produce. Solar panel recycling is still fairly new because there hasn't yet been a great volume of panels ...

From the air, the coal and solar power facilities look like pieces like a gameboard. On the ground, the emotional weight of the energy transition is heavy and the complexities are palpable.

This document was developed under the National Demolition Association (NDA) and Occupational Safety and Health Administration (OSHA) Alliance (Alliance) to provide awareness and information to all stakeholders ...

This blog will delve into the intricate relationship between demolition, excavation, and renewable energy projects, exploring how these processes contribute to the advancement of clean, efficient, and ...

One of the most ambitious solar projects in history is quietly heading for shutdown after just a decade of operation. The Ivanpah Solar Power Facility in California's Mojave Desert was once...
