

Solar wind power and energy storage policy in Barcelona – Spain

The municipality is also playing a driving role in the city's transition towards 100% renewable energy by promoting low energy use and energy efficiency, the objective being to reduce energy end-use by ...

By 2030, Spain expects to install 22.5 GW of energy storage projects, including included battery energy storage, pumped hydropower and solar thermal plants. The plan also aims for 76 GW ...

The abundance of wind and solar in Spain's energy mix reflects natural geographical advantages and years of deliberate policy decisions to promote renewables over fossil fuels.

According to a draft government report issued in June, Spain's goal is to raise the share of renewables to four-fifths by 2030. The new climate plan includes higher targets for solar and wind ...

It covers a wide range of issues and topics including but not limited to markets, technology, policy and finance. The primary focus is on all forms of renewable energy but, when ...

June 24, 2025 - Spain has taken a decisive step toward a more resilient and renewable-powered grid with the approval of new legislation aimed at accelerating energy storage deployment and...

The new decree removes the outdated concept of "non-manageable generation" and, by giving renewables-plus-storage first priority, creates a clear economic incentive for developers to add ...

How much energy can you generate? Through this map, you can find out if your building has the energy potential to generate your own energy.

In order to reduce the overall consumption, the City Council ensures reducing Barcelona energy dependence from abroad, and encourages local generation, renewable energy and networking.

A policy expert breaks down how Barcelona's local solar rule became Spain's national policy. Discover the blueprint for driving real energy change from the ground up.
