

Switzerland has been relying on pumped storage to release power on the grid when needed for decades, and laws have been tailored to support this technology. The trend is not expected to slow down.

Swissgrid sees battery storage as a key technology for the energy transition. It not only facilitates the integration of renewable energies, but also increases the flexibility of the entire electricity system.

Utility EWS AG and developer MW Storage have completed the expansion of a battery energy storage system (BESS) project in Switzerland from 20MW to 28MW, making it the country's largest.

Switzerland's reliance on hydropower, combined with ambitious solar expansion and storage initiatives, provides a strong foundation for its clean energy transition.

Primeo Energie will use our storage system to provide energy flexibility. The battery stores surplus electricity from renewable sources and feeds it back into the grid as needed. In this way, fluctuations can be balanced ...

**Challenges and Solutions** The Swiss energy transition faces technical challenges, including the need for storage solutions. Innovative technologies include electricity storage in batteries and alternative approaches like ...

The substitution of fossil fuels with renewable energy in Switzerland is possible if sufficient renewable energy is produced (+72 TWh<sup>y-1</sup>) or renewable energy carriers are imported, and sufficient storage capacity (+20 ...

Energy storage is rapidly become more and more relevant due to the increasing renewable energy fraction in the grid, the rise of photovoltaics and the increase in electric cars.

While Germany phases out nuclear plants and France bets on next-gen reactors, Switzerland's playing to its strengths. The EUR2 billion investment positions the country as Europe's 'energy savings ...
