

When was the first uninterruptible power supply invented?

Our first research and development of uninterruptible power supplies date back to the 1950s. We completed a prototype in 1954 and exhibited it in various venues. Afterward, we continued further experiments and research and developed three types of UPSs: IG, MSG, and MIG, each of which had proven to be a success by 1955.

What companies built power plants in the 1890s?

Tesla's system made it easy for companies to create massive power plants, such as the Niagara Falls hydroelectric plant, built in the 1890s. By early 1900s, Siemens, Westinghouse, Kohler, General Electric, and other popular companies were designing and manufacturing generators.

What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) is a system that provides back-up power in the event of a power failure due to a natural disaster such as a typhoon or lightning strike, or an unexpected accident. Large-scale computers such as cloud systems have become important parts of our infrastructure that support our daily lives and businesses.

What power supply does Nakayama Racecourse use?

The 250 kVA uninterruptible power supply to be used as the computer power supply delivered to Nakayama Racecourse via Fujitsu is a large-capacity set of devices consisting of a diesel generator, electromagnetic clutch, spring wheel, induction motor, 200 kVA generator, and 50 kVA generator.
