

The function of the new generator wind deflector

This new deflector was specifically proposed to minimize the severe effects of the complex wake zone created behind the conventional solid deflector that had not been investigated yet.

This study aims to maximize the efficiency of conventional Savonius turbines using the cylindrical deflector with splitters and a barrier via a combination of computational fluid dynamics simulations and the ...

Nimvari et al. (2020) proposed a new type of porous deflector in front of the Savonius wind turbine to improve performance. This new deflector is specially designed to reduce the serious influence of the ...

Explore the workings, types, and benefits of wind turbine generators along with the challenges and future of wind energy. Wind turbine generators, often simply referred to as wind turbines, are innovative ...

The torque characteristic and wake characteristic of the wind turbine are analysed by simulation method and the influence of three different structures of wind deflector on the performance of wind turbine is ...

In this chapter, the topologies and features of these machines are discussed with special attention given to their practical considerations involved in the design, control and operation. It is hoped that this chapter provides ...

One or more vortex generators are positioned on each deflecting surface. Also, a vane functions as a yaw mechanism to assist in maintaining the deflector such that its vertex faces oncoming...

Wind turbine designers have optimized cost savings and simplified the structural complexity by designing smaller rotors to generate high power. Power generation capacity can also be increased by optimizing the ...

The wind deflector accelerates the free stream wind near the wake created, and the counter-rotating turbines are placed in the near wake region to receive this accelerated wind.

Deflectors direct the wind flow away from the returning rotor blades, decreasing the negative torque and thus reducing deceleration, which increases Savonius performance.

The function of the new generator wind deflector
