

The whole story of the theft of photovoltaic panels in Xinping

Competing approaches and technologies, such as fluidized bed reactor polysilicon production, thin-film solar cells, or concentrating solar power have not been able to match the ...

China's global share in all key manufacturing stages of solar panels is predicted to rise to 95% by 2025, with Xinjiang playing a major role. This poses both an ethical and strategic risk to ...

Solar panel theft in South Africa is a growing concern affecting the renewable energy sector. Stolen solar panels fuel a black market and necessitate improved security

Solar power has emerged as a key energy source to reduce dependency on fossil fuels, but the processing of an important element in solar panels is reportedly tied to forced labour and human ...

The production of solar panels in the Xinjiang region has been linked to the alleged exploitation of Uyghur Muslims. The British Army is investing £200m in solar panels across four of its...

95% of solar panels worldwide are made up of polysilicon. Nearly half of global production comes from Xinjiang, where polysilicon is produced by Uyghurs and other Muslim minorities under conditions of ...

All four factories are located near coal power plants in Xinjiang, where cities such as Urumqi and Kashgar have at times had some of the worst air quality in China.

The research report alleges that Uyghurs, a Muslim minority group based in Xinjiang, China, have been forced to produce polysilicon, a key material used to make solar panels, under...

The global production of solar panels is using forced labour from China's Uyghur Muslims in Xinjiang province, an investigation has found.
