

Access high-resolution static maps to visualize global solar potential. For site-specific prospecting and bankable project analysis, use our professional solutions.

Click the images below to view maps of concentrating collector and tilted photovoltaic panel solar energy resources on BLM-administered lands in the six-state PEIS study area. These maps are based on ...

The U.S. Solar Photovoltaic Database (USPVDB) provides the locations and array boundaries of U.S. front-of-the-meter, photovoltaic facilities, direct current capacity of 1 megawatt or more, that became ...

Find and download resource map images and data for North America, the contiguous United States, Canada, Mexico, and Central America. View an interactive map or download ...

This interactive map examines the viability of three solar technologies in the United States with a high-level annualized economic calculation, with and without potential savings from available renewable ...

This map contains multiple layers showcasing solar infrastructure within the US. The map visualizes solar power plants, electric power transmission lines, and the photovoltaic (PV) ...

This set of maps is optimized for on-screen presentations (e.g. PowerPoint, Web, etc.) and for letter page printing (A4 format or similar). The maps are provided in the loss-less PNG format, with the ...

This powerful visualization tool provides real-time access to detailed information about every major power generation facility in the United States, from massive nuclear plants to small-scale ...

View solar supply curve data, which include latitude, longitude, available area, capacity potential, generation potential, generator capacity factor, and distance to interconnect.

Explore an interactive map of 13,000+ U.S. power plants with data on location, fuel type, generation, capacity, ownership, and emissions.
