

Discover the largest wind farm projects globally. Learn about their impact, capacity, and future expansion plans, driving the shift towards sustainable energy solutions.

The Global Wind Power Tracker (GWPT) is a worldwide dataset of utility-scale, on and offshore wind facilities. It includes wind farm phases with capacities of 10 megawatts (MW) or more.

Explore wind farm projects and discover the forces driving their growth, impact, and future potential.

Windpower Engineering is dedicated to bringing you constant updates on wind turbine projects and wind turbine companies from across the globe.

Land-based, utility-scale wind energy projects use highly efficient, state-of-the-art wind turbines that generate cost-competitive electricity at power-plant scales.

Explore wind energy projects across the United States. Track interconnection queue requests across US ISOs and utilities, with daily data updates. Learn what types of projects are being proposed, where, ...

From onshore giants dotting rural landscapes to offshore wonders braving the open seas, these projects demonstrate our commitment to pushing the boundaries of renewable energy.

Wind farm projects are taking shape both onshore and offshore all over the world. These projects are being scaled up to unprecedented sizes, pushing the boundaries of renewable energy ...

On this page, you can explore our database of planned wind projects in the US. Each month, we track projects in development and update our list of the largest planned wind projects expected to come ...

Explore top U.S. wind energy projects launching from 2026, with insights on renewable trends, onshore vs offshore growth, and policy impacts on clean power.
